

520 TON WIRELINE LIFT FRAME

Superior Performance Inc. introduces PowerWire, the newest tool in its Power Products line, designed for ultra deepwater work.

This patent-pending 520 ton wireline lift frame is DNV and ABS approved and has been dropped-objects tested and certified to ensure safety. The lift frame features attached safety pins and a basket that encases smaller parts and other moveable objects to prevent items falling to the rig floor from high above.

PowerWire hoist can easily and quickly lift 10,000 pounds or more.

Rotating E- frame
• 40,000-pound rating
• Locks into position

Interchangeable pivoting lift-sub

10,000-pound hydraulic hoist
• Wireless load cell & anti 2 block
• Dual brake system
• Sprag clutch

8-inch profile pin
• Safe pin carriage

PowerWire is electric line and slick line compatible and offers greater control over speed than a coiled tubing lift frame via a compact control stand located on the rig floor.

This heavy-weight rig tool can be used in completions/recompletions, workovers and P&A campaigns to reduce costs and improve safety.

PowerWire was designed to save time by shaving minutes and seconds throughout the lifting process; save time by using the e-frame for E-line and slick line operations; and increase safety. It is also easily transported, switching from lift mode to transport mode quickly.

PowerWire 520 ton wireline lift frame offers the superior strength and quality you expect from a Superior Performance product.

BENEFITS

- Ready for ultra deepwater subsea work
- DNV and ABS approved
- Dropped-objects tested and certified
- Easily and quickly lifts 10,000 pounds or more
- Electric line and slick line compatible
- The option to have 2 e-frames
- Easily transported
- Class 1 Division 1 and D.V.2 compliant
